

(a) Default clustering method

(b) Coherent clustering method

Is there an acceptance issue in xMW3?
Do we need to correct the ^{10}C ?

MWPC 3 Dimensions:

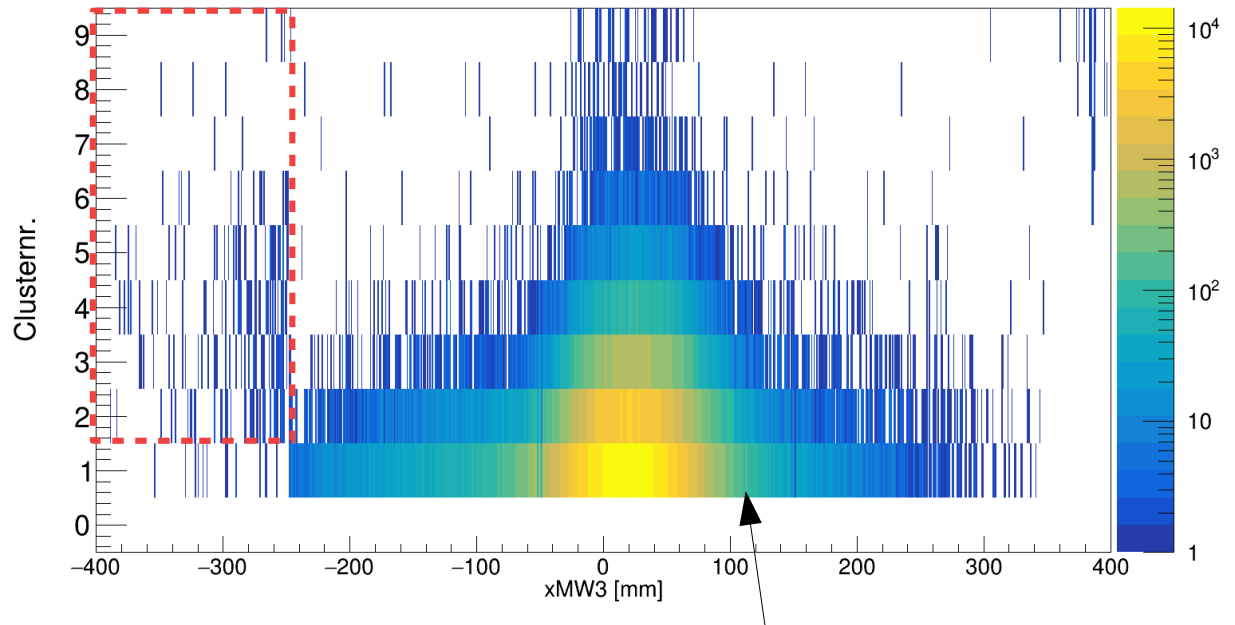

Geometry

- dimension: 900×600 mm²
- input and exit windows are 12 μm thick Mylar foil - one plane of 288 vertical pads
- one plane of horizontal wires
- one plane of 120 horizontal pads

→ this cannot be an issue of geom. Acceptance

→ it only appears when I use the “coherent clustering”

Note: for the final isotope correction we do not use the left site, due to xMW1 acceptance....

Coherent clustering only selects events with clusternr = 1
